Seeking to obtain a full-time position as a web developer.
OR get started with freelance/contract jobs.

DEV SKILLS

Back-end
- NodeJS
- Express
- REST API
- GraphQL/Apollo
- Mongoose
- NextJS

Front-end
- HTML, CSS, JS
- React

Databases
- MongoDB
- SQL
- Firebase

APIs
- Stripe
- Slack
- Multiple email APIs

Design
- Figma
- UX/UI

Version control
- GitHub
- GitLab
- Bitbucket

WORK HISTORY

OKG Tech, Monsey NY *(March 2018 – current)*

In Jan 2020 I started building a new SaaS (software as a service) called **Compky.**
Compky is an automated 'compliance management' solution for construction sites (or any site or building), where subcontractor/worker compliances and access control needs to be managed.
In this program, I've designed and built the following;
- Database schema.
- REST API.
- A robust system for authentication and authorization.
- The algorithm which validates/expires compliances.
- An email system for upload/approval requests and approved/rejected notifications.
- The responsive front-end application.
- And much more.

Before that, I was the HelpDesk manager at the OKGTech MSP (managed service provider) division, where I lead a team of IT technicians.
I Built **a full stack web app** that interacts with the company's ticketing system.

ISP, VoIP, and **internet filter** provider, London UK. *(2013 - March 2018)*

While living in the UK, I worked at a telecommunications and internet filter company since 2013, and gained many skills - to everyone's satisfaction, while in my private time learning to code**.**

ACCOMPLISHMENTS

- In Jan 2021 I built **my portfolio** website with **NextJS**, hosted on **Vercel.**
Site: https://shimon-wosner.vercel.app
Source code: https://github.com/shwosner/shwosner

- In Jan 2021 I build a real-time mobile-first **chat web app** with **React** and **Supabase**, hosted on **Netlify**.
Site: http://random-chat.netlify.app
Source code: https://github.com/shwosner/realtime-chat-supabase-react

- In 2020-21 I built **Compky** with a team of designers and developers.

- In 2019 I built a full-stack **event ticket reservation website** (NodeJS/Express, MongoDB, StripeAPI, and React) for the Dirshu UK 2020 Siyum.

- In 2016 I took **Dirshu UK** from Word/Excel documents to a single **MS Access application** using SQL and VBA, after analyzing their requirements designing and building it - which they are happy to use till today and it makes their tasks much quicker and easier.

- In 2016 I built a web app for the company I worked in with **NodeJS/Express/EJS, Graylog,** and **MongoDB,** hosted on **Heroku.**

ABOUT ME

29 years of age, married, proud father of 4 kids b"h.

4+ years into web dev.

7+ years in software dev in general.

Self-motivated web/Software developer with a high level of experience working on multiple projects front-and back-end, translating solutions into code, working across different APIs, third-party integrations, and databases.

Although I didn't have an actual dev job till Jan 2020, I was busy nights and weekends reading documentation and watching hundreds of software development tutorials.
I also paid for courses on Udemy and treehouse and paid for mentors on codementor.io

Since 2013, I've always built internal apps and tools to help me be more productive at my job.
Starting in 2014 with **MS Access, SQL,** and **VBA**,
In 2016 I built something with **PHP/MySQL,** and **jQuery**,
Then, I got into **NodeJS/Express/EJS**, **React,** and **MongoDB,**
Lately, I started playing with **PostgreSQL** and **Svelte,**

"Web development is my passion.
Building something that people can appreciate makes me happy."
